Mit-Ivy is a well-known fine chemicals manufacturer in China. Mainly involved, N -Aniline series products , resin series products.

Dear sir:

Please note:

If the temperature is too low to cause icing, please refer to the following

solution. The chemical properties of the goods have not changed, as long as the temperature is raised by more than 0 degrees.

The first thing to do is to raise the temperature.

The liquid is definitely frozen below 0 degrees, please check the MSDS.

Plan 1: Now the goods are placed in the constant greenhouse of the factory and slowly heated.

The first thing to do is to raise the temperature.

The liquid is definitely frozen below 0 degrees, please check the MSDS.

Plan 2: There is no hot pool, be sure to raise the temperature.

Solution three: Use a heating rod, little by little heat.

Russia is too cold, please find a way to put the goods in a warm place.

Echo
